A.S.G Tharun Reddy

Email: tharunr116@gmail.com

Address: Plano, Texas **Mobile:984-330-4876**

PROFESSIONAL SUMMARY

- **10 years'** Experience as a Site **Reliability Engineer, SQL DBA, Azure Cloud DevOps Engineer** with a proven record of designing, implementing CI/CD pipelines, infrastructure automation, and cloud solutions.
- Proficient **in Azure services, Docker, Kubernetes**, and scripting languages. Adept at collaborating with cross-functional teams to ensure efficient software delivery and continuous improvement.
- Experience in setting up resources like **Azure Data factory**, **Azure Key vault**, **Azure Storage account** for data engineers to load data to warehouse for analytics purpose.
- Experience in setting up **Azure Repos** and **ADO** build/release pipelines for **continuous integration and continuous deployment.**
- Experience in deploying **Infrastructure as Code** using **Terraform**
- Hands on knowledge on setting up **Azure load balancer, Application Gateway.**
- Good knowledge on implementing **Azure access governance**
- Considerable knowledge on Docker and containerization.
- Expertise in **trouble shooting** the problems occurred during infrastructure setup and connectivity issue and also while deploying the code
- Implement and manage **IAM users, groups, roles.**
- Hands on experience on implementing **firewall rules**, creating **NSG rules.**
- Experience in setting up **Azure Kubernetes service** and integrating with **Azure Container Registry.**
- Collaborated and worked with multiple teams on setting up **Azure Landing Zone.**
- Experience in setting up and implementing **Azure functions** and **Azure Logic Apps** for **automation.**
- Good Hands-on experience **on SQL.**
- Hands on experience in setting up and maintaining SQL databases in **IAAS SQL, Azure SQL.**
- Experience with ticketing tools like **ServiceNow and ICM**
- **Deployments of IAAS VMs, PAAS services** through Azure DevOps, **Automation scripts using PowerShell, High Availability** – Av, WS2019 migration.
- Leading the activities of WS 2019 migration of revenue generating application.
- Well-equipped with **Azure IAAS, PAAS** - Compute, Storage, Networking, High Availability.
- Attained Client value through onboard Azure dashboards for Reliability, Availability, Monitoring.
- Contributed to migration activities from OS WS 2012 to 2016 involved – Infra procurement, VM setup, SQL Databases restoration, SQL DBA actions.
- Proactive downsize/shutdown of under-utilized resources in subscriptions which resulted in good amount of savings.
- Experience in **Azure migration** of On-Prem .NET applications, Automations (Continuous Integration & Continuous Delivery) of various release definitions code repos from RM tool used for deployments earlier.
- PowerShell scripts to automate manual tasks in SRE space reducing considerable number of manual efforts.
- Lead IAAS migrations of Web, SQL for multiple .NET applications, Testing, Deployments, Live-site health support for production environment.
- Showcased excellent **Troubleshooting** skills in IIS site, infra level errors, SQL infra setup errors in application.

TECHNICAL SKILLS

Cloud Technologies	Azure (Azure Data factory, Azure IAAS VM, Azure Key vault, Azure Storage, Azure Logic App, Azure Purview, Azure Container Registry, Azure Kubernetes)
CI/CD	Azure DevOps Pipelines
Version Control	Git, GitHub
Containerization	Kubernetes, Docker
Language, Scripting	PowerShell, Python, SQL
Infrastructure As Code	Terraform
Methodologies	Agile/Scrum, Waterfall
Reporting & Ticketing Tools	ServiceNow, ICM

CERTIFICATIONS

- Microsoft Certified: Azure Fundamentals
- Microsoft Certified: Azure Administrator Associate
- Administering Microsoft SQL Server 2012/2014 Databases
- Microsoft Certified: DevOps Engineer Expert

WORK EXPERIENCE

Project: Enterprise Commerce Volume License : **Mar 2022 Till Date**

Client: Manpower Group, United Kingdom

Implementation Partner: TCS

Role: Azure Infra and DevOps Engineer

Responsibilities:

- Setup and Manage **Azure Data factory** infrastructure in all environments for data engineers to load data from different data source to data warehouse solution snowflake.
- Integrate and manage secrets in **Azure Key vault** for various connections used in the **data factory**.
- Integrate and manage **Azure Data Lake Storage** for storing data for analytics.
- **Access governance** using role-based access control of the azure resources for various users.
- Setup **Azure Repos** and release pipelines for Data engineers to migrate ADF pipelines from Dev to Prod Environment.
- Build and maintain pipelines **in Azure DevOps** for implementing **continuous integration and continuous deployment.**
- **Troubleshooting** infrastructure, network and pipeline issues and maintain environment sanity.
- Maintaining and tracking **Security and Compliance** of the resources and fixing the issues to be compliant.
- Writing simple **SQL** queries to validate the data at the source, before implementing the ETL process
- Collaborated with external teams to implement required network connectivity between various data sources from our Azure resources.
- Troubleshoot and fix network issues by coordinating with the external vendors.
- Strictly adhered to Security Compliance, **ServiceNow** requests resolution within SLA.
- Assisted and Guided external vendors in setting up the infrastructure in Azure for their project to kickstart.

Environment: Azure Data Factory, Azure Storage, Azure Key vault, Identity Access Management, Azure DevOps, ServiceNow, SQL Snowflake, Azure Logic App, Azure Function App, IAAS SQL, SQL MI, Azure Purview, Agile

---

Project: Global Data Center Physical Security : **Jul 2019 – Jan 2022**

Client: Microsoft, Seattle

Implementation Partner: Accenture

Role: Site Reliability Engineer, Azure DevOps Engineer, On-guard Administrator.

Responsibilities:

- Procuring of windows **IAAS Virtual machines** for Lenel application for environments from DUT to PRODUCTION in Azure.
- **On guard application** administration and maintenance.
- Creating **VNets** and **subnets** and designing and implementing network policy as per the design.
- Setting up **Azure SQL** databases, **IAAS SQL** server as part of **Lenel** application setup
- Creating and managing **Azure DNS** as part of application design.

- Hands on experience with integrating **Azure Data Factory**, **Azure Logic App** and **SharePoint** as part of automation.
- Experience in setting up **Azure Kubernetes Service** and integrating with **Azure Container Registry** as part of POC to adapt containerization of application.
- Implemented **Terraform** as part of **Infrastructure as Code**
- Collaborated and worked with multiple teams on setting up **Azure Landing Zone.**
- Hands on knowledge on setting up **Azure load balancer, Application Gateway.**
- Automated manual task by writing stored procedure in **SQL** and integrating **Azure Data Factory** and **Azure Logic App.**
- Lead the **SRE** activities – Deployments, Migrations, Certificate & service account renewals, Automations, Cost savings, Security Compliance.
- Manage and Create Storage Account and Affinity Group in Azure Portal
- Hands on knowledge on Azure Virtual Machines which includes Peering between **V'Nets.**
- Basic knowledge of **Azure Kubernetes,** learned as part of POC testing to implement in project. **IAAS VMs**– Deployment Pool setup, Deployment groups, Repo's sanity, Pipelines – Releases, Variable Groups.
- Maintained hygiene of Incidents SLA & Monthly cost optimization of Azure resources.
- With detailed plan of action**, Zero tolerance for maintenance activities** – Certificate & Service account renewals.
- I independently **worked on OS Migrations, Application Monitoring & Alerting**, DB refresh activities, Application setups, Deployments.
- Ensured **PROD/DR environment is on High Availability** for all planned DR occurrences.
- Created **Azure dashboards for Reliability, Availability, Monitoring.**
- Strictly adhered to **Security Compliance, ICMs** resolution within SLA

Environment: Azure Data Factory, Azure Storage, Azure Key vault, Identity Access Management, Azure DevOps, Azure DNS , Azure Load Balancer, Azure Kubernetes, ICM, SQL, Terraform, Azure Logic App, IAAS SQL, Agile

---

Project: Enterprise Commerce Volume License : **Aug 2014 – Jul 2019**

Client: **Microsoft, Redmond**

Implementation Partner: Accenture

Role: Build & Deploy Service Engineer, **SQL Database Administrator**

Responsibilities:

- Handled **Build & Deployments** over Weekly Production environment.
- Deployed 100+ releases across applications and ensured sanity & zero escalations on deployments.
- Migrations **– Infra Procurement** & Setup.
- Managed and maintained **SQL** databases of 1Tb to 2Tb of revenue generating applications
- Managed **Security Patches** and **S360** vulnerabilities within SLA.
- Thoroughly documented validation steps for **Production post deployment** & verification steps involved.
- Knowledge on **troubleshooting** over SQL AO issues – Restoring mode, In-recovery, Disconnected; VM level issues Server down, OS drive space, Performance; Application setup – Socket exceptions, Error codes – 500, 401, 403.
- Involved in performing fix for Cluster/Host failure issues, Failover Cluster Manager.
- Worked on IPAK related issues, Port issues, Adding/Deleting DNS, Lookup.
- Troubleshooted server hardware issues and worked with service providers to facilitate repairs.
- Managed DFS Configuration and manage Share/NTFS permissions.
- Involved in successful **IAAS** V5 to V6 migration of components Web, SQL MI AO.
- Automated **PowerShell** script for DFS copy to new DFS share while migration to OS 2016 from OS 2012.
- Took up Challenged role of End-to-End testing of Automation tool rolled out for performing remote actions on Web Components – App. Pools, IIS Logs; SQL Components – Logins, Health, Job status; Computer Management – Users Groups actions, Server Info, Shared Folders, Certificates, Event Logs.
- Installation, configuration of Operating System, Patches installation.

- Contributed to creating **CI/CD** tasks developed as part of VSTS onboard from existing RM deployment tool.
- Contributed to automation scripts to avoid manual tools such as IIS Reset, VM managed Groups add in Admins etc.

Environment: Microsoft SQL Administration, Azure IAAS, Identity Access Management, Azure DevOps CI/CD, Azure Load Balancer

EDUCATION

- MS Software Engineering from VIT University, Vellore in 2014
