

# SAURABH MISHRA

Bengaluru, India | +91-9555171606 | qa\_king@yahoo.com

---

## PROFESSIONAL SUMMARY

QA Automation Engineer / Test Lead with 12+ years of experience across the full SDLC and STLC, designing scalable, reliable, and reusable testing solutions for enterprise-level distributed software platforms. Hands-on expertise in Playwright, Selenium, TestNG, Jest, and Postman across functional, end-to-end, API, reliability, and performance test layers. Proficient in Java, TypeScript, Python, and C#. Proven experience with Selenium Grid, parallel execution, Docker containerized automation environments, and CI/CD pipelines (Jenkins, Azure DevOps, GitHub Actions). Skilled with cloud tools including Azure Cloud and Elasticsearch to test and validate distributed systems at scale. Database validation experience across MS SQL Server and Oracle. Experienced with AI-assisted development tools including GitHub Copilot, Cursor, ChatGPT / OpenAI API, Gemini, and Claude to enhance productivity in coding, documentation, research, and communication. Proven mentor and technical leader who guides QA engineers, SDEs, and product analysts in quality practices; actively participates in code and design reviews to identify risks and prevent defects early and consistent release quality. Experienced in formal on-call production support, responding to alerts and customer-reported issues with rapid root cause analysis and resolution. Experienced in BDD-driven test design using Gherkin, SpecFlow, and ReqnRoll. Customer advocate who embeds quality DNA across every stage of the software development lifecycle.

Brings project-level domain experience in **Healthcare IT** with working exposure to **HIPAA compliance** standards and regulated clinical software environments; additionally carries hands-on professional testing experience on **Online Gaming (MMORPG) platforms**, including Lineage I & II, Lord of the Rings Online, EverQuest, and Tabula Rasa.

## CORE SKILLS

**UI Automation Frameworks:** Playwright (fixtures, locators, test runners, parallel execution, playwright.config.ts), Selenium WebDriver, Selenium Grid, Puppeteer

**Java Test Frameworks:** TestNG (hands-on project experience), Rest Assured; reusable framework design and maintenance

**Test Frameworks & Tools:** Jest, SpecFlow (ReqnRoll), PyTest, Postman, SOAPUI, RestSharp, HttpClient; BDD (Gherkin, SpecFlow/ReqnRoll)

**Programming Languages:** Java, TypeScript, Python, C#, SQL, Gherkin

**API & Integration Testing:** REST API, POSTMAN, Swagger, JSON, SOAP; microservices and external system validation

**Database Testing:** MS SQL Server, Oracle; data integrity, backend validation, query validation, large dataset processing

**Performance & Reliability Testing:** LoadRunner; load, stress, reliability, and throughput test design, execution, and analysis

**Search & Cache Validation:** Elasticsearch (indexing and query validation), distributed systems testing at scale

**Cloud & DevOps Platforms:** Azure Cloud (test environment provisioning, pipeline integration), GCP (familiarity), Docker (containerized automation environments)

**CI/CD & Version Control:** Jenkins, Azure DevOps (TFS), GitHub Actions, GitLab CI, Git

**AI-Assisted Development:** GitHub Copilot, Cursor, ChatGPT / OpenAI API, Gemini, Claude; AI-integrated workflows for coding, documentation, research, communication, and automation script healing

**QA Process & Methodology:** SDLC, STLC, Agile/Scrum, test planning, code and design reviews, defect triage, KPI definition, data-driven quality improvement, on-call production support

**Leadership & Knowledge Sharing:** Mentoring QA Engineers, SDEs, and Product Analysts; QA community participation, tech knowledge sharing, process improvement advocacy, customer advocacy, quality DNA embedding

**Platforms & Enterprise:** ServiceNow, Salesforce, MS Dynamics 365, Power BI

---

## PROFESSIONAL EXPERIENCE

### Test Lead II

Impelsys | Bengaluru, India | April 2025 – Present

- Lead system-level QA automation activities for complex enterprise platforms across the full SDLC and STLC, building scalable, reusable automated test suites covering functional, end-to-end, API, and reliability testing.

- Design and maintain automation frameworks using Playwright (TypeScript/C#) and TestNG (Java); build reusable testing tools by reviewing requirements, design specifications, and application code to identify risks and prevent defects
- Participate actively in code and design reviews with engineering and product teams; identify edge cases and close automation coverage gaps to maintain consistent release quality.
- Validate Elasticsearch indices; perform MS SQL Server and Oracle database validation for backend feature correctness.
- Integrate AI-assisted tools — GitHub Copilot, ChatGPT, Gemini, and Claude — into daily workflows to improve efficiency in coding, documentation, research, and communication.
- Serve as on-call production support lead — respond to production alerts and customer-reported issues, perform rapid root cause analysis, and drive corrective actions to resolution.
- Act as a customer advocate, embedding quality DNA at every stage of delivery; collaborate cross-functionally with scrum teams, release engineering, and management to align test engineering with industry best practices.
- Mentor QA engineers and SDEs in quality assurance practices; facilitate QA community knowledge-sharing sessions and contribute to internal technical documentation and process improvement.
- Apply data-driven approach to quality improvement — track defect trends, coverage KPIs, and test metrics to identify risk areas and drive quality decisions.

### **Supervising Associate – Quality Engineering**

Ernst & Young (EY) | Trivandrum, India | June 2022 – April 2025

- Led QA automation across the full SDLC and STLC for large-scale distributed systems; designed reusable frameworks using Selenium, TestNG (Java), Playwright, SpecFlow (ReqnRoll), and CI/CD pipelines.
- Built and maintained comprehensive test suites covering functional, regression, integration, reliability, and performance (LoadRunner) testing across web and mobile platforms.
- Performed Elasticsearch query and indexing verification; validated MS SQL Server and Oracle databases for data integrity.
- Participated in code and design reviews to identify risks early and prevent defects; maintained consistent release quality across sprint cycles.
- Implemented Selenium Grid and multi-threaded execution for parallel browser testing; configured Docker-based containerized automation environments on Azure Cloud.
- Provided on-call production support — monitored alerts, investigated customer-reported defects, performed root cause analysis, and coordinated rapid resolution with development teams.
- Leveraged AI-assisted tools including GitHub Copilot, ChatGPT, and Gemini for script healing, test generation, documentation, and automation coverage improvement.
- Applied data-driven quality improvement — used defect analytics, coverage KPIs, and risk metrics to guide QA strategy; acted as customer advocate driving quality DNA across delivery.
- Guided and mentored a team of 12+ QA engineers, SDEs, and product analysts; led QA community events and promoted technical knowledge sharing and innovation across teams.

### **Senior Testing Specialist**

UST Global Pvt. Ltd | Trivandrum, India | January 2018 – June 2022

- Executed functional, integration, regression, and reliability testing aligned with SDLC and STLC standards for enterprise-level distributed applications.
- Performed performance testing using LoadRunner; analysed load, stress, and throughput results to inform data-driven quality and risk decisions.
- Validated MS SQL Server and Oracle databases; performed API and microservices verification using Postman, REST clients, and RestSharp.
- Automated critical test workflows using Selenium WebDriver and TestNG (Java/C#); built reusable test components and integrated suites into Azure DevOps and Jenkins CI/CD pipelines.
- Participated in code and design reviews; identified edge cases and coverage gaps; maintained defect traceability using JIRA and Azure DevOps.
- Participated in Agile ceremonies, sprint planning, and requirement reviews; supported test data preparation, environment setup, and on-call production issue triage.

### **Team Leader – QA**

R-Systems India Pvt. Ltd | India | June 2017 – January 2018

- Led QA activities for customer-facing applications; coordinated test execution, defect triage, and reporting.
- Managed cross-functional collaboration for release sign-off, code reviews, and test environment configuration.

### Senior Test Engineer

Fareportal India Pvt. Ltd | India (Airline Domain) | April 2012 – June 2017

- Conducted system testing, GDS testing, UAT, and regression testing for Flights and Hotels booking platforms.
- Automated critical workflows using Selenium and TestNG (Java); performed performance and exploratory testing; supported production verification and post-release sign-off.

### KEY PROJECTS

---

#### Endpoint Clinical – IRT Domain (Regulated Clinical Software)

- Built reusable automated verification scripts using Playwright (C#) and TestNG; reviewed design specifications to identify risks and prevent defects prior to test execution.
- Validated backend clinical data workflows and database integrity (MS SQL Server); integrated test suites into CI/CD pipelines ensuring consistent release quality.
- Applied GitHub Copilot, ChatGPT, and Claude for script healing, coverage improvement, and technical documentation efficiency.

#### American Express – Global KYC Platform

- Executed E2E and reliability testing across web and mobile using Selenium, TestNG, and Playwright; validated Elasticsearch-indexed customer records for search accuracy and data integrity.
- Performed infrastructure validation on Azure Cloud pipelines; participated in code reviews and acted as customer advocate to embed quality into every release.

#### Ashley Furniture – ServiceNow Platform

- Designed BDD-based reusable automation framework using Selenium + TestNG + SpecFlow/ReqnRoll; performed REST API and MS SQL Server backend database validation.
- Integrated automation results into Power BI reporting; managed Docker environment setup and on-call production incident response.

#### Equifax – Credit Reporting Platform

- Verified microservices, REST APIs, and backend data pipelines using Postman and RestSharp; performed MS SQL Server and Oracle data integrity and backend validation.
- Executed system and reliability testing in Agile setup; contributed to Jenkins CI/CD pipeline integration and participated in design reviews to prevent defects.

### CERTIFICATIONS

---

- ISTQB Foundation Level
- ISTQB – Artificial Intelligence Testing
- Agile Fundamental Certification
- JIRA Certification
- Introduction to Artificial Intelligence

### EDUCATION

---

Post Graduate – Dayanand Academy of Management Studies, Kanpur (UPTU)

Graduate – Lucknow University

### ADDITIONAL INFORMATION

---

- Continuously integrating AI tools (GitHub Copilot, ChatGPT / OpenAI API, Gemini, Claude, Cursor) into daily workflows for automation development, debugging, research, and documentation; committed to adapting to evolving AI technologies.
- Regular contributor to QA community knowledge-sharing initiatives; advocate for reusable test tool development, automation best practices, and quality engineering standards.

- Customer advocate with a data-driven mindset — consistently embed quality DNA across SDLC stages and use defect trends, coverage metrics, and test analytics to guide quality improvement decisions.
- Experienced in on-call production support rotations; root cause analysis, and coordinating resolution across cross-functional distributed teams.
