

SAI SRIKANTH PODUGU

Professional Summary

Experienced Business Intelligence, Data Engineer and Data Analyst Professional with over 10 years of expertise in Data Warehousing, Data Modelling, ETL, KPI design, Data Analytics, Predictive Analytics, Visualization, Dashboard Development. Proficiency in Power BI, Tableau, SSRS, Azure, AWS, Google Analytics. Translated complex data into actionable insights, automating reporting processes, to drive strategic decision-making. Adept at gathering business requirements, collaborating, and overseeing the complete life cycle for BI solutions. Excellent analytical, problem solving, communication skills. Strong commitment to work ethics, value-based decision making and managerial skills.

Education

Bachelor of Technology in Computer Science and Engineering - 2013

Certifications

Microsoft Certified: Power BI Data Analyst Associate

Alteryx Designer Core Certified

Skills

- **BI Tools:** Power BI, Tableau Desktop, Tableau Server, SSRS, Cognos BI, SAP BW, Business Objects, SSAS.
- **Database Technologies:** Oracle, MS SQL Server, Snowflake, Teradata, DB2, Big Query, Postgres, MongoDB
- **Cloud:** Azure, AWS.
- **ETL / Modelling Tools:** Informatica, Toad, SSIS, Alteryx, Tableau Prep Builder, Google analytics.
- **Languages:** SQL, T-SQL, PL/SQL, Python (NumPy and Pandas), R
- **Project Management:** JIRA, Azure DevOps, SharePoint, MS-Excel, Service Now
- **SDLC Methodologies:** Agile/Scrum, Waterfall Models, Iterative Models.
- **Documentation Tools:** Smartsheet, Microsoft Office Suite, SharePoint.

Projects

Client: PayPal, CA
Job Title: AI Data Analyst
Responsibilities:

Jun 2025 – Present

- Collaborated with cross-functional stakeholders to document reporting requirements and business semantics using Confluence and Lucidchart process diagrams and translated KPIs into dashboard specifications.
- Mentored junior analysts and data scientists on Power BI best practices, GenAI adoption, and enterprise analytics delivery standards.
- Built and managed analytics datasets in Snowflake, leveraging scalable compute for large-scale reporting workloads.
- Optimized Snowflake queries using clustering, pruning, and query profiling, reducing dashboard latency by X%.
- Recreated and optimized legacy BI reports in Power BI, improving query performance and usability.
- Applied Power BI performance tuning techniques including optimized data models, aggregation strategies, and incremental refresh.
- Built consumable KPI dashboards and metrics communication artifacts that translate complex transaction data into actionable operational insights.
- Developed advanced DAX measures using CALCULATE, ALL, FILTER, and time intelligence functions (YTD, QoQ, YoY) to support dynamic KPI analysis.
- Documented dashboard logic, data models, and reporting standards to support knowledge transfer and long-term maintainability.
- Delivered strategic analytics presentations and KPI scorecards to senior leadership, supporting quarterly planning and operational performance reviews.
- Collected, cleansed, and standardized large-scale datasets using Python and SQL to support regulatory-quality reporting and data-driven decision-making.
- Developed automated data quality validation and profiling scripts in Python using Pandas and NumPy ensuring standardized, analytics-ready datasets before loading into Azure AI pipelines and Synapse Analytics, , improving dashboard accuracy and reporting trust.
- Executed enterprise data mastering workflows including source identification, transformation, normalization, validation, and consolidation to support accurate operational reporting.
- Designed automated metrics generation pipelines using SQL and Python, enabling near-real-time dashboard reporting and trend analysis.
- Performed data quality audits and error reconciliation to maintain clean and accurate datasets across analytics platforms.
- Continuously improved reporting processes by optimizing data pipelines, dashboard performance, and usability of metrics systems.
- Engineered scalable ETL workflows using Python, Azure Databricks, and Spark to process terabytes of real-time
- Designed A/B testing and scenario simulation frameworks for payment fee adjustments and promotional incentives, enabling evidence-based pricing strategies and proactive risk management adjustments.

- Delivered interactive Power BI dashboards embedding price sensitivity curves and transaction forecast scenarios, enabling leaders in Finance, Risk, and Product to make data-driven decisions.
- Developed reusable Power BI semantic models, optimized DAX measures, and implemented row-level security (RLS), improving dashboard performance and adoption across stakeholder groups.
- Built production-grade AI solutions using Azure Data Factory, Azure Data Lake (ADLS Gen2), Snowflake, and Azure ML, enabling real-time monitoring of model latency and health through Azure Monitor and App Insights.

Client: SC Johnson, Milwaukee, WI
Job Title: Sr Power BI Developer | Data Engineer

Feb 2022 – Jun 2025

Responsibilities:

- Acted as a liaison between stakeholders and team members, developed end-to-end Power BI reporting solutions and GDPR-aligned data governance initiatives, translating complex requirements into scalable, automated dashboards.
- Automated workflows with Power Automate optimizing data synchronization, change orders, and approvals.
- Designed Power Automate workflows to extract and manipulate data from ServiceNow.
- Built Power Apps solutions to capture and submit sales data by integrating SharePoint, Dataverse, Dynamics 365.
- Published semantic models to Power BI from Fabric, ensuring governed, scalable data access via metrics, measures, and reusable dimensions and developed Real-Time dashboards using Power BI Service + Fabric Eventstreams.
- Implemented Spark and SQL pools in Microsoft Fabric to handle real-time data integrating with Azure Stream.
- Built self-service analytics solutions with Fabric's One Lake, leveraging DirectLake mode, KQL databases, and Dataflows, helping users to explore real-time data independently.
- Developed automated reporting solutions by integrating Power BI with Salesforce, Adobe Analytics, Smartsheet, JIRA, and Confluence via REST APIs enabling real-time project tracking.
- Customized Dynamics 365 Portals using Liquid templates, for dynamic web content rendering on Dataverse data.
- Engineered ELT pipelines using DBT for large-scale data processing over marketing and product analytics platforms.
- Automated data ingestion workflows using SSIS Control Flow, Data Flow Tasks, and Script Tasks for data processing.
- Designed and optimized data models including OLAP cubes, fact/dimensional tables, and star/snowflake schemas.
- Built data marts and aggregated tables using SQL in Snowflake's semantic layer to enhance performance.
- Developed SnowProc and SnowSQL queries, using clustering, partitioning, and materialized views in Snowflake.
- Integrated HANA views, S/4HANA Embedded Analytics with IDT and Power BI to visualize supply chain data.
- Managed financial datasets, including Accounts Payable, AR, GL ensuring data accuracy and compliance.
- Migrated reports from Tableau to Power BI, optimizing data models and calculations for performance.
- Developed ServiceNow reports to track incident resolution times, problem recurrence, and change success rates, improving ITSM performance.
- Implemented PowerOn write-back solutions in Power BI, for users to input and update data directly within reports.
- Utilized advanced SQL features (joins, window functions, pivot/unpivot operations, and ranking functions).
- Developed complex stored procedures and user-defined functions using advanced SQL in SQL Server and Postgres.
- Optimized MS SQL Server, Postgres by tuning complex SQL queries using indexing strategies (clustered, non-clustered), partitioning techniques, and query optimization, reducing query execution time by 40% for large datasets.
- Used pgAdmin and psql to manage PostgreSQL environment, including performance tuning, schema design, RBAC.
- Developed T-SQL queries for data extraction from MS SQL, improving report performance, reducing load times.
- Developed interactive reports using Power BI integrating MS SQL server, Snowflake, S/4HANA, ServiceNow and Azure.
- Analyzed and processed large datasets using Python (pandas, NumPy, PySpark) to extract actionable insights.
- Built predictive models using Python to assess supply chain risk, flagging potential stockouts and delays.
- Conducted data quality checks, data profiling, anomaly detection using PySpark to assess data completeness.
- Implemented Azure ML pipelines (PyTorch, TensorFlow) for real-time forecasting of sales and inventory demand.
- Developed LLM-powered chatbots for automated customer service, reducing response times by 50%.
- Built NLP models for customer sentiment analysis, text classification, improving engagement & decision-making.
- Utilized Azure OpenAI & AI Builder to enrich Power BI reports with predictive analytics and sentiment analysis.
- Used Power BI Copilot & Fabric AI to accelerate report development, DAX measures, automate insights extraction.
- Automated Power BI reports using Python (pandas, openpyxl, and pyodbc), reducing manual effort by 40%.
- Integrated Python with Power BI REST APIs to schedule automated data refreshes for reports.
- Automated task flows across JIRA and Confluence, creating custom fields, issue types, and rules for collaboration.
- Created complex Excel formulas (VBA macros, INDEX-MATCH, VLOOKUP, XLOOKUP, SUMIFS, OFFSET, INDIRECT)
- Developed dynamic web dashboards integrating JavaScript, React.js, D3.js, and C# for building custom APIs.
- Created custom tables in Power BI reports from importing, direct query, and live data from various data sources.
- Developed MDX, DAX queries in SSAS Multidimensional, Tabular models, improving query performance by 30%.
- Designed Semantic Layers in Power BI datasets and SSAS models for self-service BI.
- Created geospatial dashboards integrating ArcGIS with Power BI, visualizing sales data across various regions.
- Optimized DAX calculations by replacing SUMX, AVERAGEX with SUM, AVERAGE and created time intelligence DAX measures (DATEADD, DATESYTD, SAMEPERIODLASTYEAR, TOTALYTD) to track YoY, MoM, QoQ analysis.
- Deployed tabular models via XMLA endpoints to Power BI Premium workspaces, for data model deployment.
- Created paginated reports, invoice reports, balance sheets using Power BI Report Builder.
- Developed and published paginated reports (RDL) and interactive visual reports (PBIX) on Power BI Report Server.
- Used Power BI, Power Pivot to develop data analysis prototype, and PowerView, Power map to visualize reports.
- Created Power BI data models, implemented Row Level Security and published dashboards to Power BI service.

- Implemented incremental refresh, aggregations in M-code (RangeStart, RangeEnd) in Power BI service improving report efficiency.
- Enhanced performance of Power BI reports by SQL query tuning, implementing aggregation tables, and optimizing joins for large datasets, ensuring fast report rendering and responsiveness.
- Utilized Power Query's M language to create reusable data transformation scripts, for integration of datasets.
- Applied UI/UX design principles such as typography, color theory, to develop Power BI mobile solutions.
- Enabled secure data sharing in Power BI by configuring workspace roles, app permissions.
- Managed Power BI service tenant settings, capacity planning, and usage monitoring to optimize resource utilization.
- Monitored Power BI Report Server performance, troubleshooting DAX, data model inefficiencies, server load issues.
- Configured Role-Based Access Control (RBAC) & Attribute-Based Access Control (ABAC) for Power BI datasets.
- Configured Power BI Gateways to ensure secure and reliable on-premises to cloud data connectivity and refresh.
- Conducted end-to-end testing of reports and dashboards, ensuring data accuracy, visualization correctness.
- Tested DAX calculations, measures, and complex data models to ensure accurate aggregation, filtering.
- Optimized T-SQL queries by leveraging indexing and partitioning strategies for large datasets in Azure SQL Db.
- Migrated on-prem SSAS models to Azure Analysis Services, enhancing scalability, reducing infrastructure costs.
- Developed scalable NoSQL data models in Azure Cosmos DB, enabling multi-region replication for high availability.
- Ingested marketing, sales, and product data from Adobe Analytics and S/4HANA into ADLS to feed into Fabric Lakehouses and Power BI datasets.
- Built ETL pipelines in Azure Data Factory, handling data from Azure SQL DB, CSV files, REST APIs and ADLS Gen2.
- Configured ADF-linked services, datasets, triggers and performed Data Flow mapping/Debugging for data integration.
- Migrated large datasets in Databricks (Spark), administering clusters, configuring pipelines and leveraging Delta lake for ACID transactions, schema enforcement, and data versioning.
- Implemented Kafka Streams and integrated Kafka with ADF & Databricks to process real-time streaming data.
- Connected Power BI to Databricks, enabling access to Delta Lake tables and optimized queries for large datasets.
- Implemented data ingestion and processing workflows with Hadoop (Hive, Pig, and Sqoop) to handle large scale structured and unstructured data (CSV, JSON, XML, Parquet) and loaded the data into Azure Synapse for analytics.
- Developed PL/SQL-based Change Data Capture (CDC) and Delta Lake ingestion for analytics in Azure Synapse.
- Utilized Azure Synapse (Data Flow, Spark Pools, & SQL Pools) to streamline ETL, enabling direct query in Power BI.
- Built PySpark, SparkSQL based data transformation scripts on Apache Spark pools in Synapse.
- Leveraged Power BI Dataflows Gen2 to centralize data transformation logic and reduce data redundancy.
- Leveraged KQL in Azure Data Explorer and Log Analytics to monitor pipeline performance, analyze telemetry data.
- Implemented Azure Purview for data cataloging and data lineage to understand data assets and relationships.
- Integrated real-time data streaming with Azure Stream Analytics, Event Hubs, and Cosmos DB change feed, reducing batch latency through event-driven Azure Functions.
- Deployed Apache Airflow on Kubernetes (AKS) for orchestrating, monitoring pipelines, improving execution efficiency.
- Monitored Logic App runs using built-in run history, diagnostics logs, Application Insights, and Azure Monitor alerts.
- Designed secure Logic Apps with OAuth 2.0, API keys, managed identity, and configured network security.
- Automated CI/CD deployments with Azure DevOps to deploy pipelines, notebooks, datasets and infrastructure scripts.
- Automated Power BI access management using Azure AD Groups, Service Principals, and PowerShell scripts.
- Performed release management, deployment, ensuring smooth rollouts of patches, platform updates, & new features.
- Coordinated with offshore teams and provided mentorship and guidance to junior team members.
- Authored technical documentation for Power BI deployment, including version control, workspace management.

Technology/Software: Power BI, Postgres, Oracle, MS SQL Server, Azure, Databricks, Snowflake, SAP, Tableau.

Client: Southwest, Dallas, TX

Jun 2019 - Jan 2022

Job Title: Power BI Developer | Data Analyst

Responsibilities:

- Led agile meetings with business users to gather requirements and created documentation on data models, DAX.
- Collaborated with data engineers to build pipelines, conceptual, logical, physical data models to support BI reporting.
- Optimized SQL Server ensuring high availability, performance, including indexes, stored procedures, and triggers.
- Enforced data integrity by creating primary keys, foreign keys, and unique constraints across multiple related tables.
- Developed and customized Dynamics 365 CRM modules using Power Platform tools and custom plug-ins.
- Automated business processes by creating Power Automate flows triggered by Dynamics 365 events, including case creation, lead qualification, and email notifications.
- Leveraged advanced SQL functions such as ROW_NUMBER(), RANK(), NTILE(), and DENSE_RANK() to produce ranking reports and partitioned results.
- Created dynamic SQL queries to handle variable query parameters and generate flexible reports based on user input.
- Used T-SQL for complex data processing logic, including nested queries, subqueries, and aggregate functions.
- Created custom embedding solutions for client-facing web applications, ensuring integration with Power BI reports using JavaScript, C#, and REST APIs.
- Utilized Google Analytics, Adobe Analytics data via API integrations to get insights into customer journeys & behavior.
- Analyzed and visualized risk assessment data to enhance governance, risk, and compliance (GRC) reporting.
- Designed ServiceNow reports to monitor incidents, changes, problem management, and SLA performance.
- Analyzed large datasets using R and developed automated reports using R Markdown.
- Applied data anonymization and masking techniques for PII to comply with GDPR and internal data privacy policies.
- Conducted data profiling and anomaly detection using PostgreSQL analytic functions and Python (pandas, psycopg2).
- Performed statistical analysis, ANOVA, regression, hypothesis testing in R (dplyr, tidyr) to identify trends and correlations in data.

- Created ML models using AWS SageMaker for supply chain forecasting and anomaly detection in customer behavior.
- Developed ETL pipelines using AWS Glue, SSIS from MS SQL Server, Postgres, Oracle.
- Created parameterized SSIS packages to handle dynamic configurations & improve reusability across environments.
- Generated sub-reports, cross tab, conditional, drill down reports and parameterized reports using SSRS.
- Migrated reports from Excel, SSRS to Power BI report builder and utilized Power Automate in the process.
- Developed OLAP cubes, tabular models in SSAS for data analysis & connected Power View with SSAS for reporting.
- Developed VBA macros, built VLOOKUP, Pivot Tables, power pivot and generated ad-hoc reports in Excel.
- Integrated Excel with SQL databases to pull real-time data using ODBC and Power Query connections.
- Visualized supply chain metrics by integrating data from SAP ECC, SAP S/4HANA, HANA, and BW with Power BI.
- Created data models, pipelines and jobs in snowflake, orchestrated the curation of data for report consumption.
- Implemented partitioning and bucketing strategies, to optimize query performance in Snowflake.
- Created central metadata repository using AWS Glue Data Catalog, to discover and manage data for reporting.
- Built PySpark scripts and integrated Apache Spark for large-scale data processing in a distributed environment.
- Loaded data files from on premises to Redshift cluster and integrated AWS Redshift data with Power BI.
- Designed dynamic Power BI reports leveraging nested and hierarchical data from semi-structured sources.
- Integrated JavaScript with Node.js and Express.js, developing RESTful APIs for data retrieval and visualization.
- Applied UI/UX design principles to develop Power BI solutions, creating user-friendly interfaces.
- Designed Dual Axis, Bar Graphs, Scatter Plots, Pie-Charts, Heat Maps, Bubble Charts, Box Plots, geo maps.
- Migrated Power BI reports from desktop to Power BI Report Server, optimizing refresh schedules and performance.
- Built dynamic Power BI reports leveraging semantic layers, for efficient data retrieval, and user-driven insights.
- Created portfolio of interactive dashboards showing sales trends, customer analytics using DAX and M Language.
- Enhanced Power BI dataset performance by restructuring M code transformations with Table.Buffer, Table.Join.
- Implemented Power BI Service REST API for report deployment, workspace management, and data refresh.
- Implemented query folding in Power Query to minimize refresh times in Power BI Premium Workspace.
- Integrated Power BI with external APIs and services to access live data, automate data refreshes.
- Applied DAX to develop cost-benefit analysis and time intelligence reports shared reports using Power BI service.
- Built KPI scorecards with DAX using SWITCH, IF, and VAR to provide performance tracking in Power BI.
- Integrated DAX with Paginated Reports and optimized paginated report layouts for clarity and usability.
- Regularly monitored Power BI reports and fixed issues that hindered the performance of the reports.
- Executed UI/UX testing for dashboards, verifying slicers, filters, drill-throughs, and cross-report interactions.
- Automated KPI reports, built custom Power BI scripts to dynamically update Row-Level Security (RLS) policies.
- Upgraded and patched Power BI Report Server instances, ensuring high availability and compliance.
- Implemented RLS and OLS in Power BI datasets to ensure users access only authorized data views.
- Utilized Power BI's sensitivity labels to manage access control, compliance, and governance requirements.
- Configured Power BI gateways to manage data traffic and tested server upgrades and dashboard functionalities.
- Developed Azure DevOps pipelines to automate testing, validation, and deployment of scripts, jobs, and data models.
- Maintained JIRA dashboards and workflows, aligning issue tracking and sprint boards with business processes.
- Assisted business users in learning Power BI tool and functionalities, aiding in dashboard creation.

Technology/Software: MS Power BI, SSRS, AWS, SAP, Snowflake, Oracle, Cosmos, MS SQL.

Client: JPMC, Tampa, Florida

Dec 2017 - May 2019

Job Title: BI Tableau Developer | Data Analyst

Responsibilities:

- Worked with business users defining Tableau reporting requirements for Dynamics 365 CRM integrated with Teradata
- Analyzed market data, trade executions, and portfolio performance from Dynamics 365 Sales and Finance & Operations module to provide insights on investment strategies.
- Analyzed Fixed Income portfolios for credit risk, duration, and yield optimization using SQL
- Developed SQL queries and Alteryx workflows to extract and process large Equity market datasets (pricing, corporate actions, dividends) for portfolio analysis and performance reporting.
- Conducted financial analysis, including forecasting, budgeting, and variance analysis, using Dynamics 365 F & O to track P&L trends for Fixed Income and Equity trading desks, revenue performance, and operating expenses.
- Tracked key trading KPI indicators (P&L, VAR, Sharpe ratio, and portfolio allocations) for investment teams.
- Utilized SQL, PL/SQL across Teradata, Oracle, MS SQL server to establish common data models.
- Performed query tuning, indexing enhancing query performance, minimizing latency improving response times.
- Transformed large datasets using Python (pandas, NumPy, Matplotlib, PySpark) to extract actionable insights.
- Built credit risk and debt exposure models, integrating Basel III and SOX compliance metrics.
- Applied A/B testing and regression analysis to assess the impact of promotional strategies on customer retention.
- Executed test plans and resolved defects, ensured SLA compliance and system readiness for deployment.
- Utilized SSIS and Alteryx for ETL design process and loaded data into Teradata warehouse from various sources.
- Utilized Teradata utilities (Fast Load, Multiload, TPT, and BTEQ) to ETL financial data from Dynamics 365 F&O.
- Utilized Alteryx Designer extensively to develop complex workflows for data preparation, blending, and analysis.
- Integrated ServiceNow ticket monitoring, enabling incident management and resolution within FPS L3 Alteryx.
- Created collections within the Alteryx Gallery and scheduled them for testing and validation purposes.
- Implemented security protocols and access controls on Alteryx Server to safeguard sensitive data.
- Wrote custom scripts using C# to perform operations in the SSIS package and developed custom components.
- Developed and deployed CDC using SSIS, to capture incremental data changes from multiple source systems.
- Optimized SSIS package performance using parallel execution, buffer management, and data flow optimizations.

- Developed multidimensional, tabular models using SSAS, enabling intuitive data analysis.
- Utilized Tableau Prep for data preparation and blending and leveraged TabPy integration to incorporate Python.
- Created Tableau data extract (.tde) files to import dashboard users from CSV to Tableau Server using Extract API.
- Developed interactive Tableau reports and dashboards using Dynamics 365 data, Google Analytics data providing insights into sales performance, customer churn, and financial KPIs.
- Developed NRR, ARR, GRR reports for finance Quarterly townhall.
- Optimized tableau dashboards by creating semantic SQL views, queries, filters, joins, and sort functions.
- Built tableau mobile dashboards for mobile devices and implemented row level security model in Tableau.
- Structured customer interaction data from Dynamics 365 into hierarchy format and loaded them into Teradata for SSRS, and Tableau reporting.
- Created reports using global variables, expressions and functions using SSRS 2012.
- Used Tidal scheduling tool to schedule SSIS packages and SSRS reports.
- Resolved issues in tableau reports, facilitated user group meetings and conducted tableau user training.

Technology/Software: Tableau 9/10, Microsoft Dynamics 365, Teradata 14, Alteryx, SQL Server 2016, SSIS.

Client: Cigna Healthcare, Hartford, CT
Job Title: BI consultant

Aug 2017 - Nov 2017

Responsibilities:

- Involved in implementation of SAP BW including requirement gathering, data modeling, data extraction and reporting.
- Managed and secured electronic health records (EHR) systems in compliance with HIPAA security standards.
- Designed and developed dashboards and reports to track and monitor HEDIS Star Measures.
- Engineered ETL pipelines to ingest, transform, and analyze health claims, clinical, and member data.
- Developed Solution Manager, Info Cubes, DSOs, Multi providers for loading data as a part of ETL process.
- Created process chains to ensure timely and accurate loading of healthcare data.
- Performed data validation and quality assurance checks to ensure the accuracy and reliability of LTSS data.
- Extracted the data from different databases such as MySQL and Oracle into our SAP system using SQL, PL/SQL.
- Created queries in SAP Bex Analyzer specific to healthcare metrics using calculated and restricted key figures, exceptions, filters, and conditions to extract actionable insights.
- Developed Business Explorer reports using advanced functions not limited to VLOOKUP, pivot tables, formulas.
- Published and ensured that the BI reports are available to multiple end users on time.
- Developed tabular and matrix reports using SSRS, scheduled and managed them for automating report delivery.
- Migrated and customized all the Bex Reports to Power BI report server for smooth functionality as a part of migration using SQL commands, several DAX functions, filters, calculations, and VLOOKUP.
- Utilized JavaScript APIs to embed Power BI reports and dashboards into custom web applications and portals.
- Communicated with business users and clients to resolve issues, provided knowledge transfer to peers.

Technology/Software: SAP BW, Hana, Bex Analyzer, Business Explorer, MS Excel, Oracle, MySQL Database, Power BI.

Clients/Projects: Mazenet Solutions, IND
Job Title: ETL Developer

Mar 2013 - Jun 2016

Responsibilities:

- Collaborated with the business users to define Cognos reporting requirements for EDW (Teradata, Oracle).
- Developed and implemented SSIS, Informatica ETL processes to load oil and gas production, drilling and revenue data from multiple sources into EDW, utilizing materialized views and stored procedures for efficient data integration.
- Involved in designing star schema, created fact tables, dimension tables and defined relationships between them.
- Wrote script tasks using C# and VB.NET to perform complex calculations, and to interact with the file system.
- Utilized SQL, T-SQL, PL/SQL to validate the data integrity and conducted UAT with approved test cases.
- Optimized Cognos framework modelling and Informatica workflows to generate efficient SQL queries to enhance database performance.
- Created Interactive and canned reports that are used by internal and external users enhancing data accessibility.
- Developed regional level performance reports for sales managers and reconciliation reports with seasonal trends and pricing using Cognos and SSRS.
- Analyzed data level security and reports access issues and fixed them along with various production issues.
- Facilitated drill-up/drill-down/drill-through functionalities in Cognos Reports by creating hierarchy structure in Cognos framework manager.
- Developed and maintained OLAP functionality for business users through the creation of cubes.
- Generated multi-dimensional reports utilizing Cognos Cubes and multidimensional framework to power users.
- Tested tables in Informatica ETL processes used for SSRS and Cognos reports ensuring data consistency.
- Migrated Cognos reports to Power BI, optimizing data models and improving report performance.
- Scripted and executed manual test cases using SQL and DAX queries ensuring business logic accuracy in reports.
- Utilized Jira for task management, issue tracking and for collaboration with teams during SDLC and Power BI roll out.

Technology/Software: Cognos 8, Informatica, Teradata, Oracle, SQL Server, SSRS, Jira.
