🔗 <https://github.com/hardikmehta008-QA>

PROFILE

- Lead QA Engineer with **11+ years of experience in Automation, Manual, API, and Performance Testing** across **Banking, Payments, E-commerce, and Insurance** domains.
- Expertise in **building scalable automation frameworks and improving CI/CD quality pipelines** using **Selenium WebDriver, Playwright, TestNG, Maven, and JMeter**.
- Strong background in **test strategy, Agile/Scrum delivery, and end-to-end QA lifecycle management**.
- Proven ability to **enhance release quality, accelerate regression cycles, and lead cross-functional QA initiatives** to deliver reliable, high-quality software

SKILLS

Test Automation & Development:

Selenium WebDriver, Playwright, Automation Framework Development (Page Object Model – POM, Data-Driven, Keyword-Driven, Hybrid Frameworks), Maven, BDD (Cucumber), TestNG, JUnit

API Testing:

REST API Testing, SOAP Web Services, Postman, JMeter API Testing

Mobile Testing:

Android Testing, iOS Testing, Mobile Automation, Katalon Studio

CI/CD & DevOps Tools:

Jenkins, Git, GitHub, Continuous Integration, Continuous Testing

Methodologies:

SDLC, STLC, Agile, Scrum

Domain Expertise:

Banking, Payments, E-commerce, Insurance

Languages:

Java, C#

Performance Testing:

Apache JMeter, Performance Test Design, Load Testing, Stress Testing, Performance Analysis

Manual Testing:

Functional Testing, Integration Testing, Regression Testing, Smoke Testing, User Acceptance Testing (UAT), Exploratory Testing

Test Management & Defect Tracking:

JIRA, Rally, Test Planning, Test Strategy, Test Case Design, Defect Lifecycle Management

QA Leadership & Process:

QA Leadership, Team Mentoring, Quality Metrics, KPI Tracking, Root Cause Analysis, Risk-Based Testing

PROFESSIONAL EXPERIENCE

Lead Engineer - QA

12/2024 – 11/2025

Nitor Infotech

- **Led end-to-end QA activities** for the TransUnion data platform, ensuring **100% requirements traceability and coverage** by designing comprehensive test cases and managing test artifacts in **JIRA**.

- **Designed and developed a scalable test automation framework** using **Playwright, Java, Maven, TestNG, and Page Object Model (POM)**, increasing **regression automation coverage by 45%** and improving test execution efficiency.
- **Integrated Extent Reports** for automated test execution reporting and analytics, reducing **manual reporting effort by 30%** and improving visibility of test results for stakeholders.
- **Enhanced defect management and root cause analysis processes**, collaborating closely with development teams to **reduce defect resolution time by 30%** and improve release quality.
- **Partnered with cross-functional teams** including developers, business analysts, and product owners within **Agile/Scrum environments** to ensure timely delivery of high-quality software releases.
- **Led and mentored a team of 12 customer service representatives**, improving issue resolution efficiency by **25%** through process improvements and effective team coordination.

Sr. Engineer - QA

11/2021 – 10/2024

Wipro Limited

- **Owned end-to-end QA delivery** for the Credit Suisse Life Plan module, automating critical business workflows and **reducing regression testing cycle time by 35%**.
- **Developed performance testing scripts using Apache JMeter** for MasterCard APIs, identifying performance bottlenecks and **improving API response time by 20%**.
- **Designed and executed 500+ test cases in JIRA and Rally**, ensuring comprehensive **functional, integration, and regression test coverage**.
- **Developed and maintained a Selenium WebDriver automation framework** using **Java & C# using Page Object Model (POM)**, enabling **automated UI validation for daily builds through Feature Branch Testing (FBT)**.
- **Performed cross-environment testing and validation** across multiple development and QA environments, including **log analysis, smoke testing, and build verification** to ensure release stability.

Sr. Engineer - QA - Automation

06/2020 – 10/2021

Firsthandle (WARPSPD Pvt. Ltd)

- **Developed and implemented automated test scripts** for payment gateway workflows on payments.digicite.com & warpspd payments using **Playwright with Java, Selenium WebDriver with C#, and TestNG**, reducing **manual testing effort by 60%** and improving regression efficiency.
- **Built mobile automation test scripts** using **Katalon Studio** for **Android and iOS platforms**, improving mobile test coverage and execution consistency.
- **Designed and executed performance and load testing scenarios** using **Apache JMeter**, leveraging **multi-user CSV parameterization** to validate **payment system scalability and stability under concurrent user loads**.
- **Improved defect detection rate by 25%** by implementing **early-stage automation testing and QA process improvements**, enabling faster identification of critical issues in the development lifecycle.

Sr. Engineer - QA - Automation

04/2017 – 05/2020

Nintec Systems

- **Designed and developed performance testing suites using Apache JMeter** to execute **load and stress testing** for API-based applications, ensuring system scalability and performance under high user traffic.
- **Automated end-to-end test scenarios** for the **Yemo E-commerce platform** using **Selenium WebDriver, Java, and TestNG**, reducing **regression testing execution time from 2 days to 6 hours**.
- **Enhanced application stability and usability coverage** by designing comprehensive **test cases and executing functional, integration, and regression testing** across multiple releases.

Software Test Engineer

04/2015 – 02/2017

Indusa InfoTech Pvt. Ltd

- **Executed manual and automation testing** across **Linux and Windows server environments**, ensuring application stability, compatibility, and functional accuracy across multiple platforms.
- **Configured and managed virtualized test environments** using **VMware, XenServer, and Microsoft Hyper-V**, improving **environment setup efficiency by 50%** and enabling faster QA test cycles.
- **Performed functional and usability testing** for **native, hybrid, and web mobile applications** on **Android and iOS platforms**, ensuring consistent user experience across devices and operating systems.

Jr. Developer

07/2012 – 03/2015

Starlet Exports

- **Performed system, integration, and regression testing** for **Windows-based applications**, ensuring application stability and functional accuracy across releases.
- **Developed automated SQL data load scripts**, reducing **manual test data preparation effort by 70%** and improving testing efficiency.
- **Contributed to UI development and validation** using **ASP.NET, C#, JavaScript, and jQuery**, supporting application enhancements and ensuring front-end functionality aligned with business requirements.

Jr. Developer

01/2012 – 06/2012

Aark Infosoft Pvt. Ltd

- **Developed and maintained web application components** using **ASP.NET Web Forms, C#, and SQL Server**, supporting application functionality and performance improvements.
- **Designed and implemented SQL stored procedures** and generated **Crystal Reports** to support business reporting and data analysis requirements.
- **Automated database backup processes and optimized database operations**, improving **data reliability, system performance, and maintenance efficiency**.

PROJECTS

Classic OneTru Data Comparison (TransUnion)

Role: Automation Testing using Playwright & Selenium Webdriver & Performance Testing.

Duration: 12

Project Synopsis: TransUnion is a credit reporting agency. Compare classic & onetru data in an Excel file using an automation script.

Responsibilities:

- Participated in understanding the Customer Requirements and creating test cases in the JIRA tool.
- Created test script creation, execution, and rework in Selenium Web Driver using TestNG Maven, implementing the Page Object Model framework.
- Execute the created test cases and update the "Extent Report".
- Reports Bugs and creates sub-tasks for stories regarding new requirements in the JIRA tool & manages version control with Git on GitHub.
- Automated end-to-end comparison workflows, achieving 90% regression coverage
- Generated real-time Extent Reports to improve visibility and tracking.

Tools: Selenium WebDriver, Playwright, Java, TestNG, Maven, Git, JIRA

Matterhorn (Credit Suisse)

Role: Automation Testing using Selenium Web Driver & Manual Testing

Duration: 18

Project Synopsis: Retirement Journey has been implemented in Life Plan.

Responsibilities:

- Automated retirement journey workflows resulting in 30% faster sprint delivery.
- Participated in understanding the Customer Requirements and creating test cases in the JIRA tool.
- Created test script creation, execution, and rework in Selenium Web Driver using TestNG Maven, implementing the Page Object Model framework.
- Execute the created test cases and update the results.
- Reports Bugs and creates sub-tasks for stories regarding new requirements in the JIRA Tool.

Tools: Selenium WebDriver, Java, C#, TestNG, JIRA

MasterCard

Role: Performance Testing for MasterCard Admin, Customer & Payments API's.

Duration: 18 Months

Project Synopsis: Mastercard is a payments & technology company that connects consumers, businesses, merchants, issuers & governments worldwide.

Responsibilities:

- Created scalable API load tests; captured bottlenecks via detailed listener reports(Aggregate Graph, View Results Tree, etc.).
- Participated in understanding the MasterCard Web Services API.
- Created test script creation, execution, and rework in JMeter.
- Created different listener reports such as Aggregate Graph, Aggregate Report, View Results in Table, View Results Tree, and Assertion Results.
- Created a test script using CSV files for single and multiple users.
- After execution is completed in the JMeter tool, take screenshots and also collect log files.
- If bugs are found in any services, then inform the team leads & particular developers with screenshots & log files.

Tools: JMeter Tool, Rally

Warpspd Payment, LOQ8 Mobile App

Role: Manual Testing, Mobile Testing & Automation Testing

Duration: 18 Months

Project Synopsis: Warpspd is a payment website for customers & company related payments. LOQ8 is a Mobile application for merchants and moderators to sell their products.

Responsibilities:

- Participated in understanding the Mobile & Web Application for new customer requirements & implementation.
- Created test script creation, execution, and rework in Selenium Web driver using TestNG Maven, implementing Page Object Model framework.
- Reports bugs and creates new stories regarding new requirements in the JIRA Tool.
- Created test script creation, execution, and rework in JMeter.
- Created different listener reports such as Aggregate Graph, Aggregate Report, View Results in Table, View Results Tree, and Assertion Results.

- Created a test script using CSV files for single and multiple users.

Tools: Selenium WebDriver, C#, JMeter Tool, Katalon Studio for Mobile Automation

Knovel Phoenix

Role: Performance Test

Duration: 24 Months

Project Synopsis: Web Services API with different searching, marketing, registration, users, book, browse, etc.

Responsibilities:

- Participated in understanding the Web Services API.
- Created test script creation, execution, and rework in JMeter.
- Created different listener reports such as Aggregate Graph, AggregateReport, View Results in Table, View Results Tree, and Assertion Results
- Created a test script using CSV files for single and multiple users.

Tool: JMeter Tool

Yemo (E-Commerce)

Role: Functional and Regression Automation Testing using the Selenium Web Driver tool.

Duration: 12 Months

Project Synopsis: The main objective of the E-commerce Portal is to manage the details of Products, Customers, Shipping, Payment, and Categories. It manages all the information about Products, Sales, Categories, and Products.

Responsibilities:

- Participated in understanding the Customer Requirements and deriving the TestScenarios/Conditions based on the Requirements.
- Created test script creation, execution, and rework in Selenium-WebDriver using Java language.
- Validate the mock-up prepared in PDF by the design team, as per the client's specifications and needs.

Tools: Selenium-WebDriver Tool using Java language.

DT (Double-Take)

Role: Functional, Regression, Smoke, GUI

Duration: 24 Months

Project Synopsis: Move data from the Physical server to the Physical server and also the virtual server, and check all data functionality manually.

Responsibilities:

- Installation of various flavors of Linux OS on virtual machines in the ESX server.
- Knowledge of migrating virtual servers from one host to another.
- Prepare virtual environments on Windows® Hyper-V, VMware ESX, and Citrix XenServer.

Environment: Windows and Linux Server

EDUCATION

Master of Computer Applications – M.C.A

07/2008 – 06/2011

Gujarat University

Bachelor of Commerce – B. Com

07/2003 – 06/2007

Saurashtra University

CERTIFICATES

- AWS Certified Cloud Practitioner certificate
- Udemy := Selenium WebDriver with Java -Basics to Advanced+Frameworks
