PROJECT EXPERIENCE

1. CRM Development (Duration 20 Months)

Project Description:

In 2 years of time I developed a CRM system for the company to efficiently manage their clients. The system stores all client-related information in a secure database, allows document uploads, and enables seamless processing of applications based on specific requirements. Additionally, it provides the ability to update and track application statuses, improving overall workflow and client management.

- Developed custom web applications and CRMs to improve client operations and business efficiency.
- Integrated responsive design for seamless performance across devices and browsers.
- Optimized website speed and SEO structure to improve visibility and user experience.
- Built and maintained responsive websites using PHP, WordPress, Laravel, CodeIgniter, and React.js
- Integrated one to one chatbots between internal teams. User friendly and high-performing digital products. Managed databases and APIs for secure and scalable application development.
- Collaborated with clients to understand requirements and deliver solutions within deadlines

2. Myfashionizer (Duration 3 Months)

Project Description:

I developed the WooCommerce website myfashionizer.ro where I worked on both plugin customization and theme customization to match the client's design requirements. The project involved tailoring features to enhance functionality and ensuring the website aligned closely with the client's brand and user experience expectations.

- Developed and customized the WooCommerce website
- Performed plugin customization to add and enhance required features.

- Implemented theme customization based on the client's design specifications.
- Ensured the website design was responsive, user-friendly, and aligned with brand guidelines.
- Collaborated with the client to understand requirements and deliver the project as per expectations.
- Conducted testing, debugging, and performance optimization for smooth functionality.
- Provided post-development support and guidance for website management.

3. Comptus (Duration 2 Months)

Project Description:

I developed the Comptus website, showcasing their range of rugged and precise environmental sensors—including wind, solar, precipitation, and atmospheric instruments—with a clean, modern design. The site emphasizes Comptus's strengths in offering both standard and customized solutions for industries like renewable energy, agriculture, and building automation, highlighting product reliability, durability. Product order was synchronized with a 3rd party Shipping management tool.

- Developed and customized website for Comptus to showcase their environmental sensor products.
- Implemented theme customization to align with the client's branding and design preferences.
- Structured product pages to highlight features, certifications, and industry applications.
- Integrated responsive design for seamless performance across devices and browsers.
- Optimized website speed and SEO structure to improve visibility and user experience.
- Collaborated with the client to gather requirements and translate them into functional features.
- Conducted testing, debugging, and quality checks to ensure smooth functionality.
- Provided support and guidance for website updates and content management.
- Manage to synchronize all orders with 3rd party Shipping tools.
