PROFESSIONAL SUMMARY

10 years' Experience as a Site Reliability Engineer, SQL DBA, Azure Cloud DevOps Engineer with a proven record of designing, implementing CI/CD pipelines, infrastructure automation, and cloud solutions. Proficient in Azure services, Docker, Kubernetes, and scripting languages. Adept at collaborating with cross-functional teams to ensure efficient software delivery and continuous improvement. Experience in setting up resources like Azure Data factory, Azure Key vault, Azure Storage account for data engineers to load data to warehouse for analytics purpose. Experience in setting up Azure Repos and ADO build/release pipelines for continuous integration and continuous deployment. Experience in deploying Infrastructure as Code using Terraform Hands on knowledge on setting up Azure load balancer, Application Gateway. Good knowledge on implementing Azure access governance Considerable knowledge on Docker and containerization. Expertise in trouble shooting the problems occurred during infrastructure setup and connectivity issue and also while deploying the code Implement and manage IAM users, groups, roles. Hands on experience on implementing firewall rules, creating NSG rules. Experience in setting up Azure Kubernetes service and integrating with Azure Container Registry. Collaborated and worked with multiple teams on setting up Azure Landing Zone. Experience in setting up and implementing Azure functions and Azure Logic Apps for automation. Good Hands-on experience on SQL. Hands on experience in setting up and maintaining SQL databases in IAAS SQL, Azure SQL. Experience with ticketing tools like ServiceNow and ICM Deployments of IAAS VMs, PAAS services through Azure DevOps, Automation scripts using PowerShell, High Availability - Av, WS2019 migration. Leading the activities of WS 2019 migration of revenue generating application. Well-equipped with Azure IAAS, PAAS - Compute, Storage, Networking, High Availability. Attained Client value through onboard Azure dashboards for Reliability, Availability, Monitoring. Contributed to migration activities from OS WS 2012 to 2016 involved - Infra procurement, VM setup, SQL Databases restoration, SQL DBA actions. Proactive downsize/shutdown of under-utilized resources in subscriptions which resulted in good amount of savings. Experience in Azure migration of On-Prem .NET applications, Automations (Continuous Integration & Continuous Delivery) of various release definitions code repos from RM tool used for deployments earlier. PowerShell scripts to automate manual tasks in SRE space reducing considerable number of manual efforts. Lead IAAS migrations of Web, SQL for multiple .NET applications, Testing, Deployments, Live-site health support for production environment. Showcased excellent Troubleshooting skills in IIS site, infra level errors, SQL infra setup errors in application.

PROFESSIONAL EXPERIENCE

● Azure Infra and DevOps Engineer Manpower Group, United Kingdom

Mar 2022 Till Date

- Setup and Manage Azure Data factory infrastructure in all environments for data engineers to load data from different
- data source to data warehouse solution snowflake.
- Integrate and manage secrets in Azure Key vault for various connections used in the data factory.
- Integrate and manage Azure Data Lake Storage for storing data for analytics.
- Access governance using role-based access control of the azure resources for various users.
- Setup Azure Repos and release pipelines for Data engineers to migrate ADF pipelines from Dev to Prod Environment.

● Site Reliability Engineer, Azure DevOps Engineer, On-guard Administrator Microsoft, Seattle

Jul 2019 - Jan 2022

- Procuring of windows IAAS Virtual machines for Lenel application for environments from DUT to PRODUCTION in Azure.
- On guard application administration and maintenance.
- Creating VNets and subnets and designing and implementing network policy as per the design.
- Setting up Azure SQL databases, IAAS SQL server as part of Lenel application setup
- Creating and managing Azure DNS as part of application design.
- Hands on experience with integrating Azure Data Factory, Azure Logic App and SharePoint as part of automation.

● **Build & Deploy Service Engineer, SQL Database Administrator**

Aug 2014 – Jul 2019

Microsoft, Redmond

- Handled Build & Deployments over Weekly Production environment.
- Deployed 100+ releases across applications and ensured sanity & zero escalations on deployments.
- Migrations – Infra Procurement & Setup.
- Managed and maintained SQL databases of 1Tb to 2Tb of revenue generating applications
- Managed Security Patches and S360 vulnerabilities within SLA.
- Thoroughly documented validation steps for Production post deployment & verification steps involved.
