- Programming Logic — ETB (2010)

AT A GLANCE

- 15+ Years of professional experience
- 3 Roles across different companies
- 3 Languages spoken

PROFESSIONAL SUMMARY

IT Production Support Analyst with 10+ years of experience supporting mission-critical banking infrastructure at Caixa Econômica Federal – one of Brazil's largest financial institutions. Specialized in 24x7 credit card authorization systems (SAT, SIA, SMP), batch process monitoring (Control-M), and Shell Script automation for high-availability environments. Hands-on background in COBOL development and international project delivery (Spain SIA authorizer). Bilingual in English and Spanish; currently expanding into DevOps practices. Seeking to leverage deep banking-sector expertise in a challenging global IT role.

PROFESSIONAL EXPERIENCE

- Period:** Jul 2023 – May 2026
Company: QINTESS (Caixa Econômica Federal project)
 - Location: Brasília, Brazil
 - Provided 24x7 production support for critical payment and batch processing systems serving millions of daily transactions at one of Brazil's largest state-owned banks.
 - Monitored and analyzed batch process failures using Control-M; reduced mean time to resolution by identifying recurring script failure patterns and implementing preventive Shell Script checks.
 - Led troubleshooting and root-cause analysis for production incidents across banking infrastructure, ensuring SLA compliance in high-availability environments.
 - Supported system implementation cycles and production deployments, coordinating change windows and post-deployment validation in regulated banking environment.
 - Performed log analysis and diagnosis across JBoss application servers, isolating failures before escalation and minimizing downtime impact.
- Period:** Aug 2013 – Mar 2023
Company: INDRA (Caixa Econômica Federal project)
 - Location: Brasília, Brazil
 - Delivered 10 years of continuous production support for Caixa's credit card authorization systems (SAT, SIA, SMP), maintaining platform stability for a high-volume transactional environment.
 - Participated in international project with the SIA authorizer (Spain), performing COBOL development and maintenance to adapt the system to Brazilian banking regulations — one of few team members with cross-border project experience.
 - Analyzed and resolved production incidents involving COBOL-based authorization flows, reducing recurrence through code improvements and enhanced monitoring scripts.
 - Monitored production deployments end-to-end, coordinating rollback procedures and post-release stability checks for critical banking releases.
 - Contributed to system improvements and change management processes in a regulated financial environment, consistently meeting availability and compliance targets.
- Period:** Jul 2011 – Jul 2013
 - Location: Brasília, Brazil
 - Provided desktop and infrastructure support to 200+ government employees — hardware maintenance, software installation, network configuration, and user helpdesk.
