

Navaneeth T

QA Manager | AI-Driven Testing Leader

navaneethneethu14@gmail.com

+91 9916135572

www.linkedin.com/in/navaneeth-t

PROFESSIONAL SUMMARY:

Seasoned QA leader at the forefront of Automation & AI-powered testing, with 10+ years transforming quality assurance through artificial intelligence, automation, and strategic process innovation. Pioneer in integrating AI-powered testing tools (*Glean & MCP/CLI enablement for AI agents*) achieving 52% reduction in test authoring effort and 20% faster QA cycles. Proven track record managing distributed teams delivering \$2M+ revenue-enabling releases with <3% production defect rates. CSM-certified with deep expertise in Salesforce CPQ, performance engineering, and building scalable test automation frameworks across Fortune 500 enterprises.

CORE COMPETENCIES / TECHNICAL SKILLS:

- AI-Powered Test Authoring & Generation of automation scripts: GLEAN, MCP & CLI config with Claude AI
- Performance Engineering: JMeter, BlazeMeter, Neoload
- Test Framework Design UI & API: Selenium, REST, Playwright
- Programming & Scripting Language: Java, Python, SQL
- Salesforce CPQ/Commerce Cloud Testing
- Cloud Platforms: Azure DevOps, AWS
- Strategic QA Planning & Process Optimization, Distributed Team Leadership (8-12 FTE)
- Methodology: Agile, Scrum, KANBAN & SAFe
- CI/CD: Jenkins, Copado, Git & Github

EDUCATION & CERTIFICATIONS:

Bachelor of Engineering in Computer Science	VTU	2011-2015
Master's Program in Data Science & Artificial Intelligence	IBM Certified	Online
Certified Scrum Master (CSM) Credential ID: 1107895	Scrum Alliance	

KEY ACHIEVEMENTS & IMPACT:

- AI INNOVATION PIONEER: Integrate Glean AI in enterprise QA workflows, achieving 98% coverage accuracy with 52% reduction in manual test authoring and 20% faster delivery cycles. Also integrated Claude AI with Atlassian MCP and Playwright MCP to run a scripting AI model that consumes inputs from Jira and automatically generates Playwright-based test scripts.
- COST OPTIMIZATION: Delivered \$120K+ annual savings through intelligent automation strategy (1.62 FTE avoidance) while improving quality metrics.
- QUALITY EXCELLENCE: Maintained <3% production defect rate across 15+ high-impact releases supporting multi-million dollar revenue initiatives.
- TEAM BUILDING & LEADERSHIP: Built and scaled offshore QA teams from 3 to 8 members with zero attrition; mentored junior engineers on AI-assisted testing practices.
- STRATEGIC INFLUENCE: QA Council member in PI planning and presenting quality metrics to C-suite executives; identified hiring needs and drove finance decisions for resource allocation.

DOMAIN EXPERTISE:

Banking || E-Commerce || Retail || FinTech || Loyalty Programs || CRM || IOT || SaaS Security Testing || SoX compliance || Data privacy validation || Performance Testing.

PROFESSIONAL EXPERIENCE:

GTM QA MANAGER | Confluent | Bangalore, India

Jan 2023 – Present

- PIONEERED AI-DRIVEN QA TRANSFORMATION by integrating Glean AI for automated test case generation, reducing test authoring effort by 52% (30% → 14% of QA time) and cutting overall cycle time by 20% across 8-member distributed team
- ACHIEVED 98% COVERAGE ACCURACY using AI-assisted test design workflows while maintaining manual validation checkpoints to protect quality standards.
- SCALED SALESFORCE AUTOMATION SUITE from 30 to 323 AI-enhanced scripts, delivering 3,372 hours/year regression savings (1.62 FTE cost avoidance) and catching 8-10 regression bugs per quarter before production
- Delivered 15+ major NPIs (Multi-Org Commit, CPC Gateway, KStreams Add-On, Cross-Cloud Linking) supporting \$2M+ incremental revenue and \$3M+ consumption initiatives with ZERO critical production incidents
- Achieved 0-3% production defect slippage across high-risk releases (CPQ, Multi-Org, USM Licensing) with 100% quality effectiveness during peak revenue periods
- Instituted structured UAT feedback process and deployment-parity validation, reducing rework and stabilizing time-to-signoff for complex approval workflows
- Managed capacity planning for 8-member QA team across 7+ parallel workstreams, sustaining 1,000+ story points/quarter despite contractor transitions
- Drove cross-functional adoption of AI-ready Acceptance Criteria and early requirement validation, enabling AI tools to auto-generate majority of test cases while cutting mid-cycle churn
- Member of QA Council presenting to C-suite during PI planning sessions

AUTOMATION TEST CONSULTANT-4 | RingCentral | Bangalore, India

Sept 2021 – Jan 2023

- Led enterprise billing migration from legacy system to Salesforce Commerce Cloud Quote-to-Cash 3.0, serving dual BA/QA role from requirements gathering through test execution and automation f/w migration.
- Executed comprehensive Salesforce CPQ testing including Quote-to-Cash workflows, Order Management, product-price-discount mapping, ARR calculation, & multi-object SOQL data validation across Lead, Account, opportunity & Quote Objects.
- Re-architected automation framework to align with CPQ workflows, validating complex business scenarios including payment flows, sign-up processes, NGBS validations, and API endpoints via Swagger/Postman
- Drove e2e QA ownership including legacy workflow analysis via mind-mapping sessions, FDD-based user story derivation, TC authoring for API/UI workflows, and resource planning for cloud commerce implementation
- Delivered business process documentation and workflow classification (API vs. Salesforce out-of-box), establishing testing strategy for B2B/B2C commerce platforms with complete functional parity validation

SENIOR SOFTWARE TEST ENGINEER | Allegion | Bangalore, India

Jan 2020 – July 2021

- Pioneered API automation framework using REST Assured + Java (BDD) for Open IoT platform connecting

Navaneeth T

QA Manager | AI-Driven Testing Leader

www.linkedin.com/in/navaneeth-t

- locks and access control systems from 20+ manufacturers to unified cloud ecosystem, achieving 85% test coverage and 40% regression time reduction.
- Conducted comprehensive performance testing (load, stress, scalability) to determine baseline capacity and validate server architecture for 10K+ concurrent users across multi-manufacturer IoT integration platforms.
- Designed and executed end-to-end API test strategy using mind-map methodology, delivering sprint-level quality gates through smoke/regression/exploratory testing with full test lifecycle management in Azure DevOps
- Served as interim Scrum Master for 12-person development team while implementing unit testing practices using MoQ library and validating API-to-mobile application integration workflows
- Built hybrid automation suite combining REST Assured for backend APIs and manual validation for mobile integrations, ensuring functional correctness and consistency across software services and device ecosystem

TEST CONSULTANT | Genpact (*Client: Bridgewater Associates*) | Bangalore, India

Dec 2018 – Jan 2020

-
- QA member developing consolidated employee portal with SSO authentication for world's largest hedge fund, creating comprehensive test strategy spanning functional, systems, and performance categories across multi-tool integration platform
 - Automated ServiceNow API testing using Postman and built UI automation suite with Katalon (POM framework) for SharePoint-based portal, delivering tri-phase testing cycles (smoke, regression, functional).
 - Managed end-to-end test lifecycle in Azure DevOps including requirements analysis, test case authoring for feature depth/breadth coverage, test execution, defect reporting, and peer code review/optimization
 - Drove stakeholder engagement to identify external program dependencies and testing checkpoints while monitoring sprint burndown metrics and capacity planning for distributed QA team
 - Delivered scalable automation framework and test management infrastructure supporting enterprise-wide portal consolidation initiative, reducing tool sprawl and streamlining employee/investor access workflows

QUALITY ASSURANCE ANALYST | Epsilon | Bangalore, India

June 2015 – Oct 2018

-
- Delivered e2e QA for loyalty programs serving Fortune 500 clients (Alliance Data, GNC, Bank of America, Citi) using Agility Loyalty platform, including API testing (SOAP UI), DB validation (SQL), & functional/regression testing across migration initiatives
 - Built hybrid automation framework (data + keyword-driven) using Selenium + Java, reducing regression test cycles by 60% and delivering comprehensive smoke/regression suites for multi-client loyalty platform releases.
 - Conducted advanced performance testing (load, endurance, scalability, spike) using JMeter/BlazeMeter for enterprise clients (Cora Command, Hilton, GAP, Maruti, ADCS), optimizing API response times, load balancer configurations, and server resource allocation via Perfmon/Azure Monitor
 - Architected performance testing strategy analyzing application architecture to determine bottlenecks (API/DB/UI), executing soak tests on pre-production environments, and delivering optimization recommendations improving client-side performance (Lighthouse) and server-side scalability
 - Led migration validation from manual processing to dynamic inbound workflows for major financial institutions, validating COGNOS reporting tool accuracy, ensuring data integrity across multiple data-marts, and coordinating UAT/production verification with development teams.
