KEY PROJECTS

EXPERIENCE

1. CRM Development (Duration 20 Months)

Description: In 2 years of time I developed a CRM system for the company to efficiently manage their clients. The system stores all client-related information in a secure database, allows document uploads, and enables seamless processing of applications based on specific requirements. Additionally,

- Developed custom web applications and CRMs to improve client operations and business efficiency.

- Integrated responsive design for seamless performance across devices and browsers.
- Optimized website speed and SEO structure to improve visibility and user experience.
- Built and maintained responsive websites using PHP, WordPress, Laravel, CodeIgniter,

-

and React.js

Integrated one to one chatbots between internal teams. User friendly and high-performing digital products. Managed databases and APIs for secure and scalable application development.

- Collaborated with clients to understand requirements and deliver solutions within deadlines

2. Myfashionizer (Duration 3 Months)

Description: I developed the WooCommerce website myfashionizer.ro where I worked on both plugin customization and theme customization to match the client's design requirements. The project involved tailoring features to enhance functionality and ensuring the website aligned closely

- Implemented theme customization based on the client's design specifications.

-

- Ensured the website design was responsive, user-friendly, and aligned with brand

- guidelines.

- Conducted
- testing, debugging, and performance optimization
- for smooth
- functionality.
- Provided post-development support and guidance for website management.
- 3. Comptus (Duration 2 Months)**

Description: I developed the Comptus website, showcasing their range of rugged and precise environmental sensors—including wind, solar, precipitation, and atmospheric instruments— with a clean, modern design. The site emphasizes Comptus's strengths in offering both standard a
- Developed and customized website for Comptus to showcase their environmental
-
- sensor products.**

Implemented theme customization to align with the client's branding and design preferences.
- Structured product pages to highlight features, certifications, and
- industry
- applications.**
 - Integrated responsive design for seamless performance across devices and browsers.
 - Optimized website speed and SEO structure to improve visibility and user experience.
 - Collaborated with the client to gather requirements and translate them into functional
- features.**
- Conducted testing, debugging, and quality checks to ensure smooth functionality.
 - Provided support and guidance for website updates and content management.
 - Manage to synchronize all orders with 3rd party Shipping tools.
