PROFESSIONAL EXPERIENCE

Senior Software Engineer .Net

Columbus Technology Solutions, Inc, Remote

October 2023 – Present

- Spearheaded the development and maintenance of critical modules that improved system performance, such as Campaign Finance, Lobbyist Management, Analytics, and Statement of Financial Interests for Civix, a government-based project aimed at enhancing transparency and accountability.
- Utilized AI-powered tools like GitHub Copilot, ChatGPT and Large Language Models (LLMs) to accelerate development, improve code quality, and implement best practices in .NET and front-end projects.
- Enhanced productivity by using AI-assisted coding for generating efficient code snippets, refining algorithms, and streamlining development workflows in C#, ASP.NET, and Angular js.
- Built resilient .NET Core microservices with Entity Framework Core, and message brokers (Azure Service Bus), cutting API latency by 30%.
- Designed and implemented secure .NET Core applications, adhering to OWASP guidelines
- Utilized C# and .Net technologies including desktop application development to architect and implement robust solutions, ensuring seamless integration with AWS cloud services to optimize scalability and performance.

Senior Software Engineer .Net

Sky Systems Inc., Raleigh, NC

October 2022 – October 2023

- Involved in a donation management system based on C#, .NET Core, .NET 6, Desktop Applications, Azure, Azure Service Bus, Azure Queues, Azure Functions, Microsoft Power Automate, SQL, Git, NUnit, Agile, JIRA, Swagger, JSON, Dependency Injection, CI/CD, LINQ, ORM Entity Framework, and REST APIs.
- Attend daily internal scrum meetings and external status update meetings with clients to ensure project alignment and seamless communication.
- Handle assigned tickets from Project Managers by developing and rigorously testing solutions using xUnit frameworks.
- Manage code branches using Git, commit code changes, and oversee the merging process post-code reviews by software architects.
- Ensure error-free deployments through CI/CD pipelines, resolving merging errors collaboratively with architects.
- Engage in bi-weekly performance sessions with technical mentors to address technical challenges and enhance skills.

Senior Software Engineer .NET

10Pearls

Mar 2021 – June 2023

- Projects: Avenue Insights (US Property and Tax System), Telmate, (Inmate System), RTS (Loan Lending), Exelon (US Electricity Company), Lowers Risk Group (Risk Management Solution)
- Working on a US-based power management software system utilizing C#, .NET Core, .NET 6, Desktop Applications, Azure, Azure Service Bus, Azure Queues, Azure Functions, Microsoft Power Automate, SQL, Git, NUnit, Agile, JIRA, Swagger, JSON, DI, CI/CD, LINQ, ORM Entity Framework, and REST APIs with Postman.
- Developed software using C#, .NET, React.js, JSON, Git, Microsoft Power Automate, and RPA.
- Resolved tickets in a facility services system utilizing Ruby on Rails, Git, JIRA, PowerShell, and a Docker stack.
- Managed a taxation application covering all government-level legal documentation based on .NET, C#, WCF, Git, and complex SQL Server queries and stored procedures.
- Worked on a Germany-based risk management system as SaaS that provides assessments to customers regarding their businesses, utilizing Salesforce, LWC, JavaScript, and Git.

Senior Consultant .NET

Feb 2017 – Feb 2021

Centegy Technologies

- Involved in a US-based large-scale distributed middleware solution for sales and distribution that acts as a liaison between two systems, utilizing C#, desktop applications, .NET, SQL Server, stored procedures, complex queries, Windows Services, WCF, REST, Git, TFS, Dialogflow, MuleSoft, SAP .NET Connector, Node.js, and SOAP.
- The solution integrates an SAP and SQL Server-based system by moving data in inbound and outbound operations while supporting four models: SFTP, UNC, SOAP, and REST.
- Analyzed the design and assigned it for development with appropriate unit tests.
- Responsible for monitoring the release process to the Quality Assurance (QA) team.
- Contributed to the bug-fixing process until QA released the final version to the Client Services (CS) team.

Software Developer .NET

Sep 2014 – Feb 2017

Leader Group, Riyadh, Saudi Arabia

- Worked on a product, which encompasses business processes by providing modules for human resources, accounting, inventory, document management, and asset management, with localization support for English and Arabic.
- Involved in creating complex SQL stored procedures for the HR and Accounts modules, utilizing C#, .NET, Telerik, Advanced Installer, IIS, desktop application, and ORM Entity Framework (Database First approach).
- Tracked release versions and serial numbers using Advanced Installer software.
- Worked with C#, .NET 4.5, SQL Server 2012, Telerik, Fast Reports, TFS, JIRA, and Advanced Installer.

Operations Analyst

Sep 2012 – Aug 2014

Dialog Services, Jubail, Saudi Arabia

- Developed a web application for project management software using C#, ASP.NET, Crystal Reports, and SQL Server for the internal Project Department. The application manages clients, projects, jobs, vendors, vendor contacts, and credit and debit notes against invoices, while tracking job-wise payments and receipts, vendor expenses, and maintaining job-wise invoices, reporting, and administration.
- Responsible for gathering business requirements from stakeholders, providing solutions, and creating a user training manual.
- Involved in conducting monthly demos for clients and obtaining sign-off on project progress.
- Worked with ASP.NET, C#, SQL Server, HTML, JavaScript, AJAX, and Crystal Reports.

Analyst Programmer .NET

Jun 2011 – Jul 2012

Centegy Technologies

- Involved in developing various desktop applications, scalable web applications, windows services, web services (RPC, REST, and SOAP), and Windows mobile applications based on specific requirements.
- Worked with C#, ASP.NET, Windows Services, IIS, HTML, JavaScript, web services, and SQL Server.
- Responsible for unit testing and release generation, including version control management.
- Utilized various technologies, including ASP.NET, C#, web services, SQL Server, IIS, JavaScript, HTML, CSS, AJAX, FTP, Windows Mobile Development, JSON, and XML.

Software Developer

Mar 2011 – May 2011

Sakont

- Worked on a US-based project built on Salesforce that involved managing a call center contact list of customers.
- Involved in creating Salesforce validation rules, permissions, custom objects, and custom fields, as well as customizing out-of-the-box functionality using Apex language within the Eclipse IDE

Web Developer .NET

Aug 2010 – Feb 2011

WallSoft

- Worked on a remittance management product that handle tons of transactions concurrently enabling it to fetch live currency rates based on C#, Asp.Net, VB.Net, JavaScript, Core Ajax and SQL Server.
- Resolving the impediments within the project.
- Worked on Asp.NET, C#, VB.Net, JavaScript, Ajax, Core Ajax, SQL Server 2005 and HTML.
- Software Engineer .NET

Project: StudentPro (School Management System)

Feb 2010 – Jul 2010

- Worked on a US-based School Management System that includes portals for students, parents, and teachers.
- The system was developed using C#, ASP.NET, ADO.NET, PayPal Gateway, and SQL Server.
- Gathered requirements from the Team Lead, analyzed and interpreted the specifications, and developed solutions while adhering to the company's coding standards.
- Worked with ASP.NET, C#, ADO.NET, SQL Server 2005, AJAX, HTML, and integrated the PayPal Gateway within the web project.
