PROFESSIONAL SUMMARY

Full Stack Developer with 4+ years of experience building scalable backend systems, AI pipelines, and data-intensive applications for German tech companies. Specialized in Python (FastAPI, Asyncio, Pydantic) with hands-on experience in LLM integration, RAG architecture, and legacy system modernization. Proven track record of delivering measurable performance improvements – including a 97% gain in recommendation accuracy and 70% cost reduction on a core product. Bilingual English-Portuguese.

PROFESSIONAL EXPERIENCE

- AI Backend Developer** Jan 2025 – Present
DataSquads UG
 - Stabilized LLM output quality by engineering a multi-run averaging pipeline, reducing result variance and improving consistency of RPC analysis across production workloads.
 - Rearchitected the full prompting system with RAG-based data loading, delivering more contextually accurate AI responses and reducing hallucination rates in production.
 - Built a multifaceted prompt pipeline to standardize RPC analysis, enabling reliable scoring across diverse recruiting page formats.
 - Accelerated RPC processing speed by 70% through implementation of intermediate save checkpoints, cutting end-to-end pipeline latency significantly.
 - Delivered an AI Chat RAG System for recruiting best-practice retrieval, enabling real-time knowledge access for internal teams.
- Full Stack Developer** Nov 2021 – Dec 2024
picalike GmbH
 - Improved recommendation script performance by 97% for the OSA product, directly increasing the accuracy and business value of the core recommendation engine.
 - Reduced codebase complexity by 33% in the recommendations middleware through targeted refactoring, lowering maintenance overhead and onboarding time for new engineers.
 - Co-delivered the new version of the main product, achieving an average 70% cost reduction through architectural improvements and infrastructure optimization.
 - Increased maintainability of the flagship product by 50% by introducing CI/CD pipelines and Dockerizing the deployment stack, enabling reliable automated releases.
 - Migrated a legacy proprietary library from Python 2 to Python 3, preserving full backward compatibility and unblocking modernization of the wider platform.
 - Led technology stack modernization from Python 2 Flask + SQLite to Python 3 FastAPI + MongoDB Atlas, improving performance, scalability, and long-term maintainability.
