PROFESSIONAL SUMMARY

OF EXPERIENCE Role: Project/ Program Manager Client: IRS Managing day to day activities of multiple projects using agile framework and its operations. Managing the sprint roadmap and its quarterly deliverables. Updating local Drupal work space setup, coordinating with infra for setting up 6 different environments and New Resource onboarding activities Was managing the account and monitoring and analyzing customer usage of products Role: Technical Program Manager Client: Kaiser Permanente Managing project time line, traceability matrix , sprint time line, resource velocity and QA deliverables for each release & feature level. Managing the design and code review, provide feedback on optimizing, scalable, maintainable solution. Managing branching strategy and suggested some modification on approach, actively involved on setting up the CI/CD pipeline and deployment process for prod and non-prod environments. In charge of Vendor selection to evaluate each portfolio and provide feedback and manage the tech-debts. Be part of the product roadmap and understand the upcoming needs and proposed architectural solution and leverage the reusability of existing components and technology selections. Prepare the RCA's and mitigation plan with respect to any p1 incidents, performing necessary load testing using automation scripts. Used Mirantis Kubernetes Cluster Environment, GitLab for JAVA Spring Boot micro service, SQL Server 2018, Mongo DB, used Kafka streaming for real-time events to capture. Been part of project management to design and develop a multi-year program that transforms KP applications to be highly reliable, elastically scalable, and resilient. Participated and all ceremonies of SAFe PI planning / Waterfall development project (planning sessions, stand-up sessions, review sessions, backlog grooming sessions, pointing sessions, and retrospective sessions) as directed by the KP. Active participant in all infrastructure related upgrades, vulnerabilities, any integrations like vault, istio etc. plan effort estimations and validation plan, communication accordingly. salesforce data cloud, commerce integration to accommodate right set of patient / customer, product data. Call Data Records, Vendor Language usage and availability, Vendor devices Integrated with Tableau, Power BI Role: Sr. Manager Applications Client: Northern Trust Integrated with salesforce data cloud, customer relational management platform with emotomy asset management application Implemented solutions design, and delivery of enterprise level solutions. Experienced managing Agile/Scrum projects. Strong experience working with business application owners and development teams to document and clarify business and user requirements and manage scope of defined features and functions during project lifecycle. Lead all design/development aspects of SDLC including API integrations for Client Application Studios projects in partnership with PMO Implemented business objectives and provide a high-quality automated solution. Estimate resources (human and other) required to achieve project goals and manage assigned budget throughout execution of the project. Proactively managed changes in project scope, identify possible risks, and devise contingency plans. Demonstrated excellent communication skills including the ability to effectively communicate with internal and external customers. In certain circumstances, operated as Scrum Master for the project team, otherwise conducted Scrum of Scrums to ensure delivery is proceeding on schedule. Provided hands-on leadership in the delivery of application enhancement releases, configuration and deployment activities, and automation of testing and deployment activities. Provided architectural and design direction to development teams, and other dependent vendor application teams. Used strong industry knowledge to relate to customer needs and dissolve customer concerns and high level of focus and attention to detail. Was more actively involved on the performance testing (i.e., speed, response time, stability, reliability, scalability) for each feature / functionality under certain workload. Hands-on design & development experience with multiple data technologies, including data warehouse, data integration, Power BI Implementation, data modeling, DAX Power Query, SQL Role: Account / Delivery Technical Manager Client: United Airlines Strong Client Relationship and cloud team building Skills on, off, near shore Relevant experience to enable selection criteria for cloud providers and application suitability assessments including detailed cloud architecture design for global scale and high availability Worked with Senior leadership team to design technology and process landscape and develop overall cloud solution strategy Supported migration of application workloads to cloud (i.e., lift and shift, hybrid cloud) Familiar with modern development and testing techniques such as continuous delivery and continuous integration (CICD) Performance testing was executed by spinning up 16k virtual instances (i.e. mock devices) in AWS Used AWS managed services such as Kibana, Redis, Elasticsearch, ElastiCache, CloudWatch Used node js runtime environment to build server-side applications using java script. Design and develop different apps using python script and Django framework. Analyzed business features and functions, build and deployed respective micro services and integrated with CICD pipeline Actively involved to configure dot Net services

vendors to make sure all the components are well planned to test Role: Delivery Manager Client: ColgatePalmolive, TourTrek(GoBe), Chamberlain, Bell Helicopter, TREK, SAP LMP(SuccessFactors), Royal Caribbean Cruise, Southwire SaaS product implemented and integrated with different functional modules using hybrid cloud platforms Lead projects (and/or multiple sub projects of a program) of various sizes, complexity and Collaborate with offshore, onsite team, SAP team and vendor partners to achieve desired results. Evaluates emerging technologies and provides thought leadership and perspective for adoption where appropriate. Manage cross functional execution of A/B and multi variate testing on all aspects of a customer journey. Defines, organizes and plans project schedules to meet required project/program timeframes. Presented Hybris CPQ out of the box capabilities to different clients and actively involved in POC's Responsible for the development of effort estimations utilized in new work proposals. Setting up the AWS private cloud space for multiple commerce projects and cloned instances based on the client requirement. Developed project schedules and determines resource needs, works closely with resource managers to ensure proper resource allocation to the Program. Experience on integration with salesforce commerce cloud and bi-directional customer data migration based on business rules. Actively involved with testing team to make sure all the functionalities are meeting the expected results before product owner perform the UAT. Establishing and maintaining strong relationships with business and IT partners that includes third party vendors. Lead technical discovery sessions with the product owner/client to develop a comprehensive understanding of the technical requirements and integrations interfaces for new commerce solutions. Understanding the Clients b2b requirements and proposed solution by integrating with third party systems, changes around existing hybris environments. Leveraged node js runtime environment for different front-end frame works such as react, angular, vue. Modified/Integrated with internal/external micro services based on business needs. URL's mappings using python Django framework. Was actively involved in product, customer, pricing data migration from third party systems, loaded test and real data using IMPEX. Worked on upgrade project hybris 5.7 to hybris 6.6, resolved technical challenges came across during this upgrade process, actively involved with SAP Cloud support team to make sure the risks are tracked and resolved on time. Chamberlain b2c (SAP Retail) project requires nice look and feel front end so was closely working with the vendor to explain the capabilities of hybris 6.5 OOTB and estimated the effort, resource to execute the delivery. Role: Sr. Manager Creation of documentation of formal requirements, use cases, user stories and models that fulfill business, customer, technical needs. Used tools and methodologies to create RAID logs (Risk, Action, Issue and Decision) Prepare meeting agendas meeting minutes, distribute meeting documentation, and maintain and monitor action item listings are necessary collaborates with other cross-functional teams from all domains throughout the lifecycle of solution delivery Due to project B2b and B2c (SAP Retail) complexity was actively involved on architecture of this project, this project involves Hybris CPQ 6.3 Actively involved in configure price quote data migration to Hybris CPQ data base from different systems Implemented CPQ solutions including configuration rules, product pricing, member discounting and quote creations. Managed project schedule, budget and escalated risks, issues to the management / business owners on need basis. Prepared steering committee slides about the project status on weekly basis and present to stake holders and executives. Project team followed agile methodology and sprint was planned for 3 weeks. Review and modified the scope/statement of work, estimates, schedule, assumptions, acceptance for the vendors. Prepared NFR, architecture diagrams, was active decision maker on all technical decisions, evaluated existing Webservices JCO calls and recommended the modification, cut over activity and Go Live checklist. Co-ordinating with BI (Business Intelligence) team to get weekly and biweekly sales tracking reports and it's update. Closely worked with SAP vendor for understanding the Hybris roadmap and plan our project phases accordingly. Was responsible for hire, fire, employee evaluation, Prepare the New Hire 90 day's plan and meet the management business objectives. Closely worked with Infrastructure team for accessing webservice end points, SAR, F5 load balancer and DBA team. Managed two vendors, our internal offshore team and onsite teams, was leading the end-to-end project. Role: Sr. Manager Collaboration application developers, designers and architects to ensure shared understanding of the business model and detail requirements. Managing the vendor project manager's and their respective tasks, leading the IT track (i.e. includes Pay metrics, Vertex, PKMS, HybrisDataHub, SAP, infrastructure track leads). Prepared steering committee slides about the project status on weekly basis and present to stake holders and track leads. Manage the KPI's related to all the projects. Track project against its schedule, budget and reporting status to management on a regular basis. Was part of the Capital project request, recommended some changes around capital vs expenses and hybris 5.7 license negotiation. Worked closely with BI team (Business Intelligence) to gather respective parameters from different systems they are looking for to prepare higher management reports. Proposed new work flow to execute the tasks, defects, bugs, enhancements in JIRA confluence, Prepared and reviewed RACI chart with each track leads and evaluated expected deliverables from the vendor. Was leading the cutover activity, CAB process while implementing the project for soft/hard launch. Prepared capacity work sheet to measure the effort each individual and made sure to achieve the sprint goal. Review the scope/statement of work, estimates, schedule, assumptions, acceptance for the vendors, recommended if any changes required and validated with internal legal department. Was part of the Go-NoGo decision, Disaster Recovery exercise, SAP/Hybris refresh on different landscapes. Involved in phase 2 project, integrating with Widen DAM (loaded asset URL's using IMPEX). Decommissioning legacy

release planning and other agile development related activities. Collaborate with customers, vendors, industry consultants, and senior company management to define service levels. Integrate activities with business units and other IT departments to ensure the successful implementation and support of project efforts for B2b and B2c (SAP Retail and other platforms). Track project against its schedule, budget and reporting status to management and client on a regular basis. Interacting with the client and development team to maintain the priorities, if needed negotiate the timeline. Recommended new processes where needed to improve quality, cost efficiency, or on time delivery and maintained awareness of new, emerging technologies. Work closely with marketing teams to develop and implement a customer relationship & customer experience management roadmap. Was responsible to guide a team with cross function areas including Demandware (salesforce) developer, Hybris developer, architects and testing Partners in with the business in solution identification and requirements definition and ensures continuity of understanding throughout the development cycle. Developed risk assessment, risk mitigation, documentation of issues, assigning issues and tracking issues closure, escalates the issues if needed. Preparing the scope/statement of work, estimates, schedule, assumptions, and acceptance for the client. Worked closely with customers and pre-sales teams to manage customer trials, propose technical solution with options. Got an opportunity to work on end-to-end implementation using Demandware (salesforce) and Hybris product.

Role: Enterprise Architect Client: State Farm Insurance. Integrated customer platform (ICP) is the organizational level initiative started by State Farm to come up with an online integrated platform available for customers and agents that will provide enhanced user experience. Prepared ADS, ADD for architectural changes based on the need and also explained pros and cons. Participated in mobile and web application architecture planning, Project Schedule, Framework design to determine optimal solution architecture, efficiency, maintainability and scalability. As the project was implemented with SOA architecture was fully engaged with different development centers to resolve the dependencies, issues, risks and make sure to meet project deadline. Was familiar with client's entire solution landscape and help leverage and extend that landscape to meet biz needs. Conducting project risk issue meetings and interacting with architecture team, technical team, business team based on the needs. Update the weekly project status to the stakeholders and act accordingly. Communicate strategies across IT teams and fosters collaboration in IT and business area. Plan, organize, control, and lead subordinate functions within established budgetary and manpower plans. Utilize a mix of offshore and onshore development organizations to deliver efficient and quality software applications. Was keeping track of the vendor deliverables as such data management, system test plans, ensure software quality assurance state farm standards are achieved and validate that business goals are accomplished. Role: Application Architect Client: Constellation Brands. Identifying and articulating needs, determining project scope, creating a plan, estimating project costs, effort, duration Evaluated the feasibility of the architecture and technologies related to a business changed. Presented the tactical and strategic benefits of adopting a consistent architectural approach within the context of the client's business to help the client to justify his investments. Assist in prioritizing and preparing data architecture and recommend data management solutions, methodologies. Researching and implementing skill gaps and new skill required meeting changing technology and business needs. Identified the risk impact of architectural changes on the business, application relationships and data flow. Provided buy/hold/sunset recommendations for B2b, B2c application. Client: Northern Trust Corporation. Implemented different projects of Data direct (CLA, SLA, Contribution, Policy tree) and were fully responsible for SDLC. Defined standard methods and processes for system integration and ensure adoption and use of those standards. Developed project plan, Project Schedule, gathering requirements from business users and deal with production issues. Suggested some technology changes based on the business requirement and traffic while accessing the application. Assist in developing business test cases with respect to the need of the application before business user starts testing. Preparing High Level and detailed System design, Data flow diagrams for the project based on need. Assisted with web Services and make sure that the connectivity of consumer and providers are working fine. Role: Application Architect Client: Walgreens Co. Implemented different projects as AARP Credit Card Program, Vitality Eligibility Program, Ecommerce, Rx Compliance Advisor and was fully responsible for SDLC. Engage with stakeholders, Develop project plan, Project Schedule and deal with operational issues. Was fully involved in implementing and integrating vendor software with current architecture, risk analysis and CR's. Responsible for the creation of IT business case & detailed project plans in Clarity Responsible for creating artifacts necessary for application development using Requisite Pro and Clear Case. Responsible for the financial and communication plans for the program. Analyze and assess risks, assumptions and develop corresponding program charter and execution plans. Assist in developing logical / physical data models and Web Architecture intended for the Incentive management system being managed under Agile Methodology Provided technical assistance with Tuxedo Service, Production Reporting / Interactive reporting architecture. Client: Northern Trust Corporation. Manage / Implement application development methodologies such as Waterfall, Agile, and Iterative development using global delivery teams. Facilitate project meetings, JADs, Scrum and other necessary due diligence for the successful implementation of ongoing projects Establish ongoing lines of communication with the project team with continuous monitoring and management of IT Application risks Negotiate and resolve issues as they arise across areas of the project and where they impact on other activities, systems and projects.

through Microsoft® SharePoint™. Responsible for driving business & technical requirements and successful implementation of this project. Role: Solution Architect Client: Energy Market Authority. Role: Technical Lead Client: Jurong Port Pte. Ltd., Singapore Telecommunication Ltd. (Singtel) Role: Product/Project Lead Client: Solectron Technologies, Telekom Malaysia, Comline Systems Sdn. Bhd. Role: Sr. Software Engineer/Developer Client: Wimco, Britania, Kolkata Stock Exchange, Haldia Petro Chemicals, Coal India Ltd.

PROFESSIONAL EXPERIENCE

● SUMMARY

- ▶ Accomplished professional around 20+ years of IT experience.
- ▶ Delivering various stakeholder projects utilizing global delivery teams.
- ▶ Experience in Cloud solutions (IaaS/ PaaS/ SaaS) Strategy and
- ▶ Implementation for mid or large size organizations (this includes private/public
- ▶ Clouds – on AWS, SAP C4C, Salesforce Commerce, Salesforce Data cloud, Demandware, Magento)
- ▶ An effective IT professional with experience in integrating complex business and technology solutions.

KEY PROJECTS

● Life Cycle Management

Waterfall / Agile Iterative Development using RUP Statement of Work (Sow) Service Level Agreements (SLA) Visio
Microsoft Project Clarity Estimation and Resource Planning Issue/Risk mitigation System Analysis and Design
Users/Client Interaction Onsite-Offshore Coordination Production Support Developm

● Project Management Tools: JIRA, Microsoft Project, TFS, SharePoint, Visio, Office Suite, Confluence, Workday

Testing tools: Selenium, Cucumber, Silktest, QTP, Jmeter
